DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joel Fogelson on 04/28/2010.

The application has been amended as follows:

1). Amend claim 15 to read:

15. Acquisition device for obtaining files by accumulating points, for at least one user of at least one receiver of data of at least one communication network, said user being able to earn points by occurrences of at least one predefined operation accomplished by said user, and to acquire at least one of said files by downloading of said file via said communication network when the aggregate number of said points reaches a predetermined level associated with said file,

~~wherein~~ said device comprises an automatic control module for ordering and downloading portions of said file via said network, where

said automatic control module operates without user operation;

said automatic control module orders the downloading of portions of said file when the number of points earned by said user reaches a fraction of said predetermined level of said file such that said fraction also corresponds to the downloaded portions of said file and the downloaded portions of said file are less than the entire file;

said fraction is greater than zero and less than one; and

a storage means, accessible to said receiver, which stores portions of said file ~~designed to order the downloading of each of said portions when the number of points earned by said user reaches a fraction of said predetermined level which corresponds to said each portion from said portions.~~

2). Amend claim 26 to read:

26. Acquisition process for obtaining files by accumulating points comprising the steps of:

~~in which a user of a receiver of data of a communication network earns~~ earning points by a receiver of data coupled to a communication network by having a user accomplishing at least one predefined operation, ~~and~~

~~acquires~~ having said receiver acquire at least one of said files by downloading of said file via said communication network when the aggregate number of said points reaches a predetermined level associated with said file,

~~wherein a said receiver downloading via said network to a storage space accessible to said receiver, of portions of said file is~~ are ordered automatically without user intervention by ordering the downloading of each of said portions when the number of points earned by said user reaches a fraction of said predetermined level which corresponds to said portion such that said fraction also corresponds to the downloaded portions of said file and the downloaded portions of said file are less than the entire file; and

said fraction is greater than zero and less than one.

Allowable Subject Matter

2. **Claims 15-27** are allowed. The following is a statement of reasons for the indication of allowable subject matter: The present invention comprises an acquisition device that automatically downloads and stores files by accumulating points that user

Art Unit: 2425

earned by watching advertisement; the file is automatically downloaded in portions when the number of points earned by the user reaches a predetermined level, where the predetermined level of points corresponds to the downloaded portions of the file and the downloaded portion of the file is less than the entire file.

The closest prior arts, Shintani, Kienzle, and Candelore show a similar system. However, Shintani discloses a device where user earns points by watching commercial and apply those points to watch pay programs, Kienzle discloses a credit based media presentation, where customer accumulates credits and use them to watch media, and Candelore discloses a digital coupons that is used for pay televisions. Thus, Shintani, Kienzle, and Candelore fail to disclose the limitation(s), said device comprises an automatic control module for ordering and downloading portions of said file via said network, where said automatic control module operates without user operation; said automatic control module orders the downloading of portions of said file when the number of points earned by said user reaches a fraction of said predetermined level of said file such that said fraction also corresponds to the downloaded portions of said file and the downloaded portions of said file are less than the entire file; said fraction is greater than zero and less than one; and a storage means, accessible to said receiver, which stores portions of said file, as required by all the independent claims.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
